ATALAYA

SPATIAL
RECONFIGURATION
FOR CONCENTRATION

WHAT IT IS

Atalaya is a brushed metal cube with integrated wireless charging, connected to the home automation system. When you place your phone on it, the environment changes: the lights dim, the temperature drops slightly, ambient noise is replaced by white noise, and notifications are silenced across all connected devices.

It does not ask you to resist the phone. It asks you to put it somewhere. From there, the space does the rest.

The phone is not the enemy. It's the key.

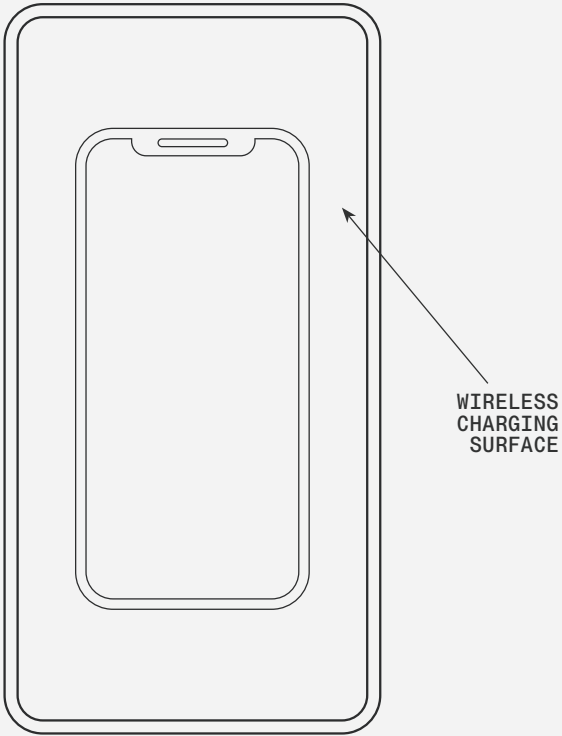

FIG.39

WHY IT WORKS

Each of Atalaya's environmental interventions has independent scientific support. Research on lighting documents that focal light over the work area reduces cognitive fatigue and improves sustained attention. Studies in controlled climate chambers show that moderate temperature drops improve performance on tasks requiring concentration. A study published in Scientific Reports (2022) found that white noise at forty-five decibels improves sustained attention, accuracy, and execution speed compared to unpredictable ambient noise.

The combined and simultaneous effect of these three interventions as an integrated system has not been studied. That hypothesis is part of what this project proposes.

ANATOMY OF THE OBJECT

Atalaya is a functional physical prototype. The brushed metal cube integrates a wireless charging surface on its top, sized for iPhone. It is compact, with no screen, no buttons, no visible indicators. Its only interface is the surface where you place the phone.

The connection to the environment operates through standard home automation protocols: Philips Hue for lighting, Google Home and HomeKit for other devices. It requires that the space where it is used has lighting, climate control, and audio compatible with these systems.

Atalaya is not a universal solution. It works in controllable environments and acknowledges that limitation as part of its definition.

HOW TO USE IT

It has one single action. Everything else is automatic.

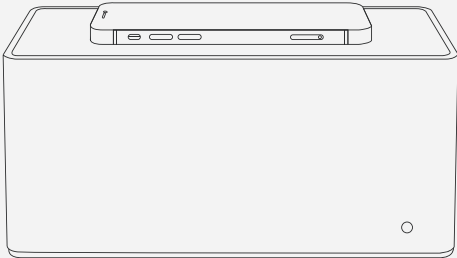

FIG.40

STEP 1 CONFIGURE THE ENVIRONMENT ONCE

Connect Atalaya to your home automation system through the relevant app (Philips Hue, Google Home, or HomeKit). Set the parameters for each intervention: light dimming level, target temperature, white noise volume. This configuration is done once and does not need to be repeated.

FIG. 41

STEP 2 PLACE ATALAYA IN YOUR SPACE

Atalaya is portable. You can take it to the living room, the kitchen, wherever you are going to be. No visible cable connection is needed: wireless charging is fully integrated. Place it on the nearest surface and the system adapts to the environment of that room.

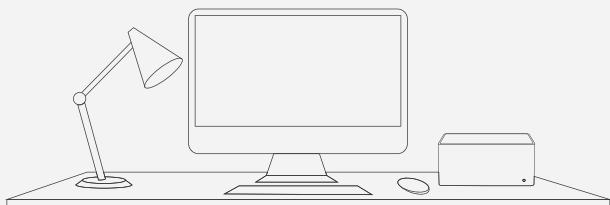

FIG. 42

STEP 3 PLACE THE PHONE

When you want to activate focus mode, place your phone on Atalaya's surface. No button to press, no app to open, no confirmation required. The gesture of putting the phone down is the instruction.

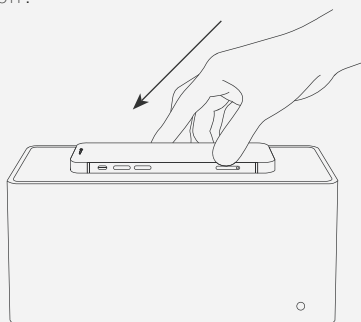

FIG. 43

At that moment, the environment begins to change.

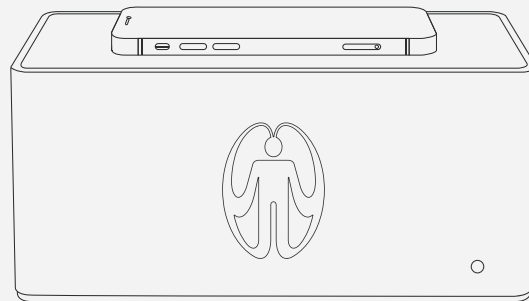

FIG. 44

STEP 4 THE SPACE RECONFIGURES

The lights dim. The temperature drops two to three degrees. White noise activates. Notifications go silent. An interruption – but not an invasive one. The only thing left to do is what you were going to do.

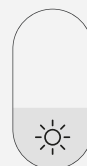

FIG. 45

STEP 5 PICK UP THE PHONE TO DEACTIVATE

When you finish, lift the phone from the surface. The environment returns to its usual state. Focus mode deactivates with the same gesture that activated it: putting the phone down or picking it up.

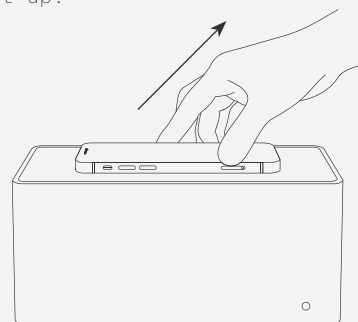

FIG. 46

WHEN TO USE IT

Atalaya is designed for any moment when you want to be present in what you are doing: working, reading, cooking, watching a film, sleeping. It is not exclusive to productive focus – it is for any activity the phone tends to interrupt without you having asked it to. Its value lies in sessions where the quality of the environment matters, regardless of what you are doing in it.

Unlike other proposals in this manual, Atalaya does not intervene in the compulsive impulse to pick up the phone – it intervenes in the conditions of the space before that impulse appears. It is a preventive tool, not a reactive one.

WHAT ATALAYA DOESN'T DO

Atalaya doesn't stop you from using your phone.

IT DOESN'T
BLOCK YOUR
APPS.

IT DOESN'T
TRACK YOUR
SCREEN
TIME.

IT DOESN'T
GUILT TRIP
YOU.

IT DOESN'T
JUDGE YOU.

You can pick it up at any point – and that gesture deactivates focus mode entirely. No restriction, no friction in that direction. If you pick it up, the environment returns to normal.

It also does not work if the environment is not equipped with compatible systems. It is portable as an object, but not universal: it needs an existing home automation setup to operate.

Atalaya does not create concentration.
It removes what gets in the way of it.

CURRENT LIMITATION

Its main limitation is not technical but one of access: it requires a compatible home automation environment – smart lighting, controllable climate, connected audio –

that is not available in most homes. It is a solution for already-equipped spaces, which significantly reduces its potential reach.

The combined effect of the three environmental interventions as an integrated system remains, for now, a working hypothesis. That is also part of the proposal.
